AQURE
YOUR CENTRAL POINT-OF-CARE

AQURE

YOUR
CENTRAL POINT OF CARE

AQURE is a point-of-care (POC) IT solution that supports you in managing Radiometer analyzers and other POC devices, as well as operators, competencies, and compliance, all from your desk.

Wherever you work, AQURE is YOUR **CENTRAL POINT** OF CARE

With AQURE, you get support in

• Device management

• Operator and competency management

• Compliance management

• Sample flow management

With healthcare becoming more regulated and hospital facilities becoming more interconnected nowadays, you need a solution that can put you at the center of it all. AQURE is the solution designed for you.

DEVICE **MANAGEMENT**

AQURE helps save you time in managing devices. You can now remotely manage connected point-of-care devices in various hospital facilities and optimize device uptime with AQURE.

- See the status of each analyzer to ensure that it is up and running

- Get an instant overview of issues and get assistance with troubleshooting through a guided process

- Get an email notification immediately when an action is needed. You can prioritize solving the issue rather than searching for it

OPERATOR AND COMPETENCY
MANAGEMENT

Ensure that only qualified operators have access to analyzers by using open e-learning platform and managing operator competencies and performance.

Have peace of mind, knowing that caregivers can focus less on manual documentation and spend more time with patients.

- Get an overview of operator profiles and competencies
- Set performance criteria for operators and receive an email notification if they are not met
- Push the list of qualified operators to analyzers

COMPLIANCE **MANAGEMENT**

With instant access to compliance documents, you can simplify inspections and reduce your workload.

With AQURE, you get support in

• Paperless compliance documentation at your fingertips

• Easy access to data and reports from any hospital PC with authorization

• Automatic generation and evaluation of monthly QC statistics, overview of root causes, corrective actions, and regulatory-compliant reports

SAMPLE FLOW **MANAGEMENT**

AQURE supports patient data accuracy by optimizing the sample process with intelligent data registration.

• Through FLEXLINK, a sample registration module in AQURE, caregivers can link together patient, operator, and sample IDs at bedside

• Patient results from any connected device are captured and forwarded by AQURE to hospital IT systems

Have peace of mind, knowing that you can focus less on manual entry of data and spend more time with your patient.

AQURE

As a scalable solution, AQURE can fit into any hospital setting. This point-of-care IT solution has been designed for you.
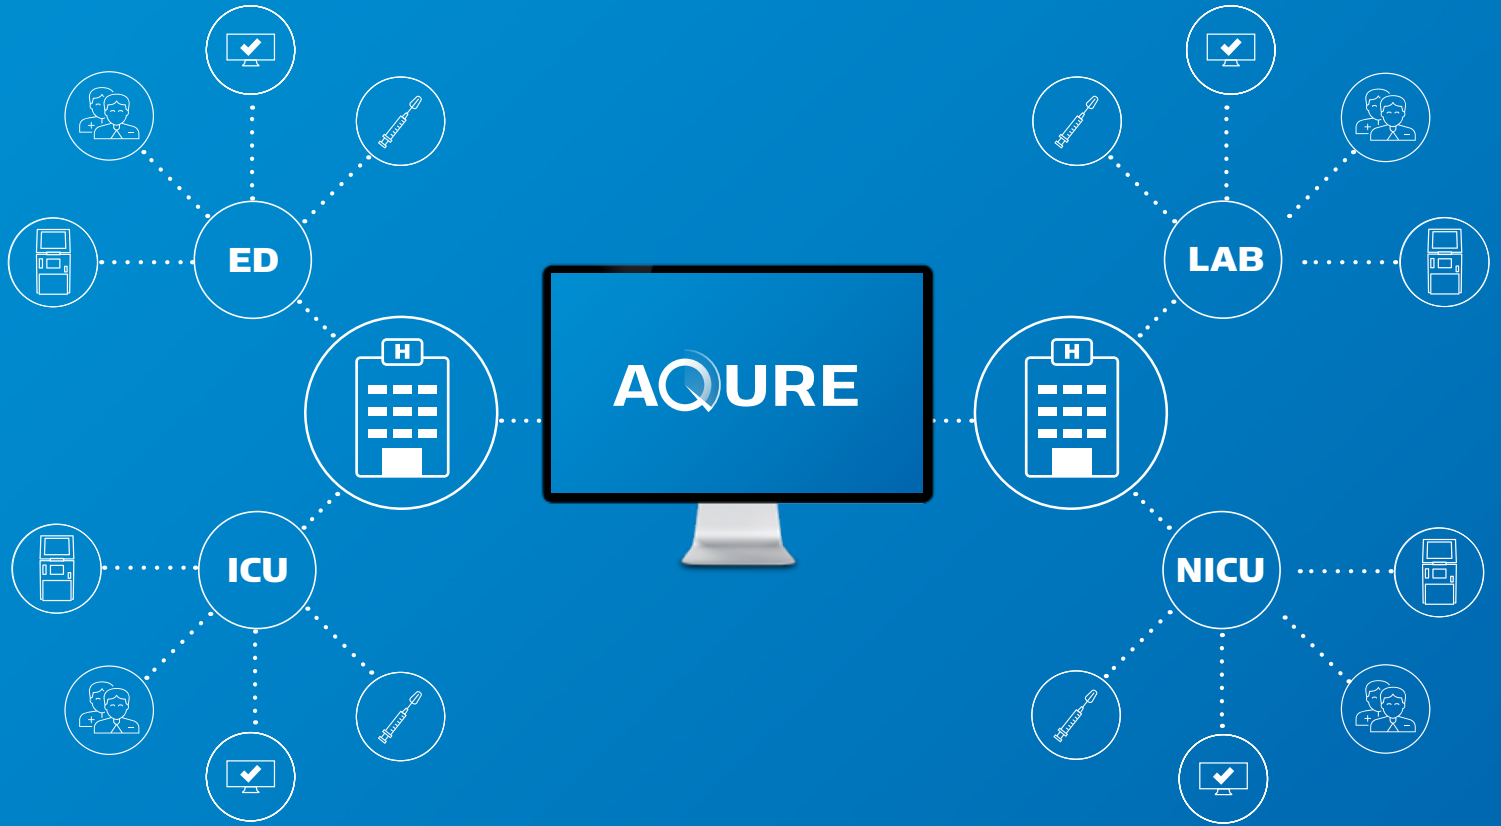

It is Your **Central Point** of Care.

"We currently use AQURE in the cardiac unit, where intensive care is seeing real benefits. Ultimately, we have more control and a better overview of what is happening."

—Lisa Vipond,
POC Coordinator,
Great Ormond Street Hospital

"The Radiometer solution also allows us to meet the French requirements, particularly in regards to accreditation. It allows us to ensure that results are always reliable."

—Dr. Laurence Burc-Struxiano,
Biologist, Hospital Practitioner,
Louis Pasteur Hospital
